

Aventura eliminates back-end EMR printing headaches

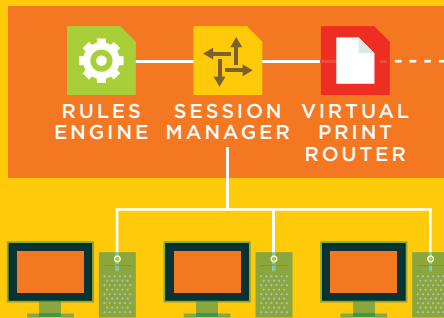

AV BACK-END PRINTING

AV BACK-END PRINTING

SESSION A = AV IP
SESSION B = AV IP
SESSION C = AV IP

AV SERVER

SOLUTION 1:
We dynamically update printing assignments when a user roams.

SOLUTION 2:
We alert users when there is a printing error and let them choose a different printer.

PRINTER 1

PRINT SERVER

PRINTER 2

- > Works with any EMR back-end (UNIX) printing
- > Eliminates EMR print table management
- > Dynamically manages Windows print table management
- > Minimizes print driver management
- > Alerts users of printing errors
